

INTELLIGENT BUSINESS STRATEGIES PRESENTS

Mike Ferguson

**Big Data Architecture &
Technology for Analytics**

www.intelligentbusiness.biz
training@intelligentbusiness.biz

OVERVIEW

This one-day course is aimed to get you up to scratch on big data technologies such as , Spark, Cloud Storage Data Lakes, Hadoop, Lakehouses (e.g., Databricks Lakehouse Platform, Apache Iceberg), Flink, Analytical SQL, NoSQL DBMSs, and Multi-Platform Analytics. What is big data? How can you make use of it? How does it integrate with a traditional analytical environment? How do you re-define your architecture to create a stronger analytical foundation for your company? What skills do you need to develop for big data analytics? All of these questions are addressed in this knowledge packed course.

AUDIENCE

IT directors, CIO's, CDO's, IT Managers, BI Managers, data warehousing professionals, data scientists, enterprise architects, data architects, data engineers

LEARNING OBJECTIVES

Attendees to this seminar will learn:

- How big data creates several new types of analytical workload
- Big data technology platforms beyond the data warehouse
- Big data analytical techniques and front-end tools
- Understand when to use what where - business use cases for different big data technologies
- How to create a stronger data and analytical architecture by integrating big data, data science, data warehouses and BI
- How to integrate real-time data into your data warehouse
- How to analyse un-modelled, multi-structured data using cloud storage, Spark and Hadoop
- How to leverage predictive analytics in BI reports & dashboards

MODULE 1: AN INTRODUCTION TO BIG DATA

This module defines big data and looks at why business wants to use big data technology. It looks at big data use cases and the difference between big data, traditional BI and data warehousing

- The demand for data?
- Types of big data
- Why analyse big data?
- Industry use cases – popular big data analytic applications
- What is data science?
- Data warehousing and BI versus big data
- Popular patterns for big data technologies
- Types of big data analytical workloads
- Architecture options for an extended analytical ecosystem

MODULE 2: BIG DATA TECHNOLOGY

This module looks at big data platforms and storage options.

- The new multi-platform analytical ecosystem
- Analytical RDBMSs and NoSQL options
- An introduction to the Hadoop stack

- Apache Spark framework
- The big data Hadoop marketplace
- The cloud analytics option – cloud storage versus Hadoop, Amazon (Data Lake Formation, Kinesis, Elastic MapReduce and Redshift), Google (Pub/Sub, Dataplex, Data Fusion, DataProc, Big Lake and BigQuery), Microsoft Azure (Event Hub, Stream Analytics, Data Lake Storage, HDInsight, Data Factory and Synapse Analytics, ML Service, Power BI), IBM (Streams, Analytics Engine, Db2 Warehouse on Cloud, Cloud Pak for Data), Oracle Autonomous Data Warehouse and Oracle Analytics Cloud, SAP Data Warehouse Cloud and SAP Analytics Cloud
- Accessing big data via SQL on cloud storage, SQL on Hadoop or External Tables in Cloud Data Warehouses
- The increasing power of analytical relational DBMSs
- Streaming and analysing data on Kafka
- Analysing big data – What's in the data scientist's toolkit

- Streaming, natural language processing, classic machine learning at scale, deep learning, graph analytics

MODULE 3: INTEGRATING BIG DATA ANALYTICS INTO THE ENTERPRISE

This module looks at how new big data platforms can be integrated with traditional data warehouses and data marts to create a new data and analytics architecture for the data driven enterprise. It looks at stream processing, cloud storage, Hadoop, NoSQL databases and data warehouse and shows how to put them together in an end-to-end architecture to maximise business value from big data.

- Beyond data warehouse – a new analytical architecture and ecosystem for the data driven enterprise
- Integrated management of the analytical ecosystem
- Integrating stream processing, cloud storage data lakes, Hadoop, Data Warehouses and MDM
- Simplifying access to a multi-platform analytical ecosystem using data virtualisation
- Multi-platform optimisation – the final frontier

MODULE 4: INGEST, PREPARE, ANALYSE AND GOVERN BIG DATA

This module will look at the challenge of integrating and governing big data and the unique issues it raises. How do you deal with very large data volumes and different varieties of data? How does loading data into Cloud storage or Hadoop differ from loading data into analytical relational databases? What about NoSQL databases? How should low-latency data be handled? It also looks at tools and techniques available to data scientists, business analysts and traditional DW/BI professionals to analyse big data.

Topics that will be covered include:

- Connecting to big data sources
- Data ingestion into cloud storage or Hadoop
 - Data ingestion options

- Challenges of capturing different types of big data
- Streaming data ingest
- Parsing unstructured data
- Change data capture – what's possible?
- ELT data preparation, transformation and integration at scale using Spark or parallel SQL on cloud data warehouses
- Managing data scientist and business analyst self-service data preparation – Alteryx (including Trifacta), Azure Data Factory, DataRobot, Google Cloud Data Fusion, IBM Cloud Pak for Data, Tamr, MicroStrategy, Salesforce Tableau Data Prep Builder and others
- Unified data delivery – a common data integration supply chain for the entire analytical ecosystem
- Multi-platform data and analytical pipelines from data lake to enterprise data marketplace
- Data governance in a big data environment
 - The importance of an data catalog Data
 - Organising data in data lake storage or lakehouses
 - Governing data privacy
- Governing data in a data science environment
- Analysing big data
- Supervised and unsupervised machine learning
- Natural language processing & sentiment analysis
- Search, BI & big data
- Graph analytics
- Analysing data in motion using streaming analytics
- Integrating it all with self-service BI tool

PRESENTER

Mike Ferguson is Managing Director of Intelligent Business Strategies Limited. As an independent IT industry analyst and consultant, he specialises in BI / analytics and data management. With over 40 years of IT experience, Mike has consulted for dozens of companies on BI/Analytics, data strategy, technology selection, data architecture, and data management. Mike is also conference chairman of Big Data LDN, the fastest growing data and analytics conference in Europe and a member of the EDM Council CDMC Executive Advisory Board. He has spoken at events all over the world and written numerous articles. Formerly he was a principal and co-founder of Codd and Date Europe Limited – the inventors of the

Relational Model, a Chief Architect at Teradata on the Teradata DBMS. He teaches popular master classes in:

- Big Data Architecture & Technology
- Building a Competitive Data Strategy for A Data-Driven Enterprise
- Data Catalogs – Governing and Provisioning Data in a Data Driven Enterprise
- Data Virtualisation & the Logical Data Warehouse
- Data Warehouse Modernisation
- Embedded Analytics, Intelligent Apps & AI Automation
- How to Govern Data Across a Distributed Data Landscape
- Migrating your Data Warehouse to the Cloud
- Modern Data Architecture
- Practical Guidelines for Implementing a Data Mesh (Data Catalog, Data Fabric, Data Products, Data Marketplace)
- Real-Time Analytics

ONSITE TRAINING

All training can be given as onsite education, tailored to your company's requirements. For further details please contact us at training@intelligentbusiness.biz
